

# OTONNALE

Set up in January 2012, Otonnale is a wholly-owned subsidiary by Octalfa. This company has two essential missions:

- Identify new projects that could be developed by Octalfa or that could be useful to one of its subsidiaries;
- House the minority interests of Octalfa initiative.

Otonnale is active in the life sciences sector in the broad sense, namely human and animal health, but also glances at sustainable development and initiatives for modern and sustainable agriculture.

The R&D projects identified by Otonnale may enrich the project portfolio of [Orphelia Pharma](#) or [Orega Biotech](#) and could also give rise to the creation of an *ad'hoc* venture which in turn will be financed by Octalfa. Should the projects be of academic origin and/or be not mature enough, Otonnale could ensure a maturing phase before creation of the venture.
